

Suite 2000 Product Overview

Integrated Performance Solutions

Powerway Suite 2000 is a total software solution for automating your organization's paper-intensive processes. Consisting of 16 software modules and the Powerway Desktop command center, Powerway Suite 2000 helps your engineering, quality and manufacturing teams comply with international business standards and overcome problems caused by a lack of collaboration.

Engineering Advantage Products

Quality Planner

Powerway Quality Planner helps you create and manage documents throughout the entire APQP process. It simplifies the creation and control of documents such as the Control Plan, Process & Design FMEAs, and others for the PPAP submission. It also includes document creation components used to generate such documents as Gage R&R Studies, Capability Studies, Process and Setup Instructions, Inspections and can interface with Corrective Action.

Configuration Manager **NEW PRODUCT!!!**

Powerway Configuration Manager allows for the graphic creation of Bill-of-Material (BOM) data into "objects",

each representing the various parts or assemblies that make up a product. This unique concept of BOM objects allows for a graphical modeling of the product life cycle, and allows you to navigate through documents or part records based on product properties or with a part-centric approach. You get product knowledge and access to support documents and drawings.

Engineering Viewer

Powerway Engineering Viewer is a product licensed to enable printing, viewing, and marking up CAD/CAM or engineering drawings with vector-based file formats that expands Powerway Desktop product's viewing capability to approximately 200 file formats.

Document Control Products

Desktop

The Desktop is the core of the Powerway document management system. While each of the Powerway modules focuses on a particular type of business document, the Desktop is the command center that brings all of those documents, as well as non-Powerway documents (word processing, spreadsheets and CAD drawings, etc.), together into one location for easy access and viewing. User-friendly and affordable, Powerway Desktop can be deployed on every PC in your organization, providing everyone with controlled access to business-critical documents. Users can view documents, participate in electronic approval routes, and receive notification of new revisions to documents that affect them — all without needing any other Powerway products installed on their workstation.

Document Manager

Powerful and flexible, Powerway Document Manager automates many of the aspects of document control necessary to comply with your business standards and Document Control requirements. It offers secure

document and data control, complete document revision history, a distinct audit trail for each document, and integrates seamlessly with Powerway Desktop for convenient document access across the enterprise — all to help you reduce time to compliance.

Intranet Publisher

Powerway Intranet Publisher solves the two biggest problems with corporate intranet site: 1. Converting, indexing, and maintaining the registration and expiration of all business critical documentation; and 2. providing human resources to perform these tasks. Powerway Intranet Publisher automatically publishes, maintains, and expires registered documentation from the corporate document management system to the company intranet.

Number Dispenser **NEW PRODUCT!!!**

Powerway Number Dispenser enables you to create, control, manage, track, report, and use preset number lists for numbering schemes like document numbers, work order numbers, drawing numbers, or purchase order numbers.

Suite 2000 Product Overview

Quality Solutions Products

Assessor

Powerway Assessor is used to perform initial assessments of your quality system and to produce reports — including a GAP Analysis — to reveal your company's quality system status and improvement over time. Assessor presents a number of questions (based on your Template Pack), organized by system element, that resemble the questions asked by lead assessors during an actual audit, along with assistance to interpret the questions. Your responses are recorded, scored, and retained by the system for further reporting and analysis.

Audit Manager

This product automates the internal audit process from planning and scheduling through reporting. It simplifies the audit creation process by allowing auditors to create and configure checklist questions by department, product, or process specific to scheduled audit needs. Audit packages — consisting of checklist questions, related procedures, and audit information — are easily created and printed for complete audit information.

Corrective Action

Powerway Corrective Action manages the internal corrective action process — from nonconformance reporting, to verification, to reporting at management review meetings — with complete traceability. It simplifies the requirements of Corrective and Preventive Action by allowing you to generate nonconformance reports and issue Corrective Action Requests (CARs) to the appropriate personnel.

Gage Manager

Powerway Gage Manager automates crucial activities associated with the tracking, calibration, and study of measurement instrumentation in a manufacturing and/or laboratory enterprise. It accesses Powerway's document control technology through the Powerway Desktop. This integration enables Gage Manager to recognize and coordinate activities between companion applications such as Quality Planner and Instruction Writer.

Instruction Writer

Powerway Instruction Writer helps you create and maintain your Level III operator work instructions. It provides structure and format for instruction documents, so you can focus on entering content. It also presents text, flow diagrams and a pictorial view of your instructions!

Policy Writer

Powerway Policy Writer helps you create a first draft policy manual in minutes! It comes with a pre-structured, pre-formatted document architecture, and the requirements to enable you to author a system manual.

Procedure Writer

Powerway Procedure Writer helps you write your Level II system procedures in a pre-structured, pre-formatted document architecture. With sample procedures and a wizard-style interface, you can develop clear, simple, and concise procedures that are structurally sound and professionally formatted.

Factory Floor Advantage Products

Provides real-time statistical process control (SPC) for defect prevention and reduced scrap, rework, and process variation. It is broken down into three modules: SPC Administrator, SPC Examiner and SPC Operator.

SPC Administrator

Administrative functions like system setup, privileges, workstation controls, and product configuration.

SPC Examiner

All data analysis features (viewing charts, statistics, and alarms and generating reports).

SPC Operator

All data collection activities.
