

Powerway® Engineering Advantage Quality Planner

Quality Planner simplifies the creation and control of documents such as the Control Plan, Process and Design FMEAs, and more.

- Allows you to create and control documents used for Advanced Product Quality Planning (APQP) as documented by the Automotive Industry Action Group AIAG and PPAP (Production Part Approval Process).
- Originates “living” documents and tracks document status through APQP stages.
- Provides document revision history at each stage of the APQP process and an easy-to-follow audit trail.
- Allows you to register supporting documents, even those created in other software programs, so all of your APQP projects are kept in one place and available to those who need them.
- Produces high quality PPAP documents ready for signatures and submission to your customers.

Designed to handle the entire APQP process from design to prototype to production, Powerway’s Quality Planner simplifies the creation and control of documents such as the Control Plan, Process and Design FMEAs, and more. It also includes modules used to generate documents such as the Gage R&R Study, Capability Studies, and Process and Setup Instructions.

APQP Process Control

Using Powerway Quality Planner, you can easily track the five APQP stages: Planning, Product Design and Development, Process Design and Development, Product and Process Validation, and Production. More specifically, Powerway Quality Planner provides you with a framework that supports the APQP process.

You can also track each event in the APQP process—Prototype, Pre-launch and Production. Powerway Quality Planner lets you predefine customer lists, machines, tools, etc., rather than repeatedly entering that information. In addition, it cross-references documents by part number, operation, and characteristic as necessary, and shows you which documents have yet to be generated for that APQP project.

Powerway® Engineering Advantage Quality Planner

Document Creation Modules

Powerway Quality Planner helps your core team concentrate on the APQP process by letting you delegate many of the documents to the appropriate individual(s), even those outside the core team.

The APQP documents are authored and managed with relationships so you only have to enter data once that gets proliferated throughout the document collection. Each document module gives your people the ability to edit an APQP document (such as a Gage R&R) at the same time you are working on another document or in another module.

Simplified PPAP Submission

Powerway Quality Planner simplifies the tedious process of gathering and validating all of the necessary documents for sample/PPAP submission. One click lets you see all of the validated documents, letting you choose which ones to submit, and another click prints them — ready for signatures.

Powerway Suite 2000

Powerway Quality Planner is one of the modules in Powerway Suite 2000. From design through production, Powerway Suite 2000 automates paper-intensive engineering, quality and manufacturing processes, helping you reduce costs, improve quality and speed time to market. Using Powerway Suite 2000, you can bring the entire organization together to overcome the problems caused by a lack of communication and collaboration such as late engineering changes, customer complaints, product quality issues, and scrap and rework.
