

Powerway Quality Solutions provides quality system development and implementation that includes enabling the documentation of business processes and controls necessary to meet customer expectations and compliance to industry standards.

Keith Crowe is Quality Manager for J H Yeomans, a company currently registered to ISO 9002 and working to achieve QS-9000 registration by March 2001. He recently had this to say about J H Yeomans' choice of Powerway Quality Solutions to help them with registration: "As part of our QS-9000 strategy, we needed to find a modular software solution to allow cross-referencing and data integration across APQP and auditing functions. Other software we reviewed offered isolated, rather than integrated, solutions.

"Being able to prove to customers that we are carrying out their requests is an essential part of corrective action. By using Powerway Quality Solutions, nonconformance requests can be raised, managed and electronically routed. When a customer rings in for a status on their order or a general query, the operator can access the records and see immediately past and current history!

"Longer term, we want to deploy Powerway systems to the shop floor which will not only maximize production efficiency, but give everyone viewing access to quality systems so they will become more involved in what we are trying to achieve."

Although they come with the promise of empowering your organization and giving your employees the tools they need to increase productivity, most quality systems actually become a drain on your resources and can even be counterproductive to your corporate goals. From producing quality system documentation to tracking continuous improvement activities, you and your employees can quickly drown in paperwork and not even know if it's the right paperwork.

Powerway Suite 2000 Quality Solutions automates and streamlines all the steps necessary for successful quality system management and does it all electronically. The software includes authoring tools to write basic quality systems documentation and applications to help you determine your compliance with quality standards, as well as corrective action and gage management tools.

Totally integrated with all other Powerway Suite 2000 applications, Quality Solutions applications save time, reduce costs and allow you to focus on your quality system rather than tedious procedures and documents.

Powerway Authoring Tools: Policy, Procedure and Instruction Writer.

Maintaining a quality system results in a variety of policies, procedures and instructions employees must create, use and maintain on an ongoing basis. Powerway Authoring Tools automate, simplify, analyze and control your quality documents.

- Allows concentration to be on content, not format.
- Registrar-approved content.
- Helps with first draft, level II and III procedures, documents and instructions.
- Powerway Template Packs are available for your business standard.

Powerway Audit Manager and Assessor: Be ready anytime.

Be sure your company is ready for the audit and has proper documentation. Powerway Audit Manager and Assessor are all you need to conduct your own internal audits so you know when you are ready for an audit.

- Streamlines the audit process.
- Provides guidelines and tips to simplify the standards.

Powerway Corrective Action: Get on the right track.

Keep track of corrective action across many departments and product lifecycles. Powerway Corrective Action is designed to manage the internal Corrective and Preventative Action process.

- Easy-to-use wizard interface for reporting nonconformances.
- Nonconformance is automatically e-mailed to responsible person.

Powerway Gage Manager: Track, calibrate and measure.

Automate crucial activities associated with the tracking, calibration and study of measurement instrumentation in a manufacturing or laboratory enterprise. Powerway Gage Manager is a flexible, modular system of components for all activities involved in the management and maintenance of the gage life cycle.

- Easy to use wizard interface for studies.
- Complete and detailed status of any gage in one click.
- Access control and security.

Powerway Quality Solutions is part of the Powerway Suite 2000 integrated performance solution.

From product design through production, Powerway Suite 2000 automates paper-intensive engineering, quality and manufacturing processes within your organization, helping you reduce costs, improve quality and speed time to market. All Powerway software applications are designed to work individually or together, and are grouped into four solutions groups for your convenience:

- Document Control provides complete paperless document and data control.
- Engineering Advantage provides advanced quality planning.
- Quality Solutions provides integrated quality management.
- Factory Floor Performance provides real-time factory floor data collection.
